A new volume in the Emerging Issues in Analytical Chemistry series, Exercise, Sport, and Bioanalytical Chemistry: Principles and Practice focuses on the basic and applied aspects of energy metabolism in humans. Concise and scientific, yet intelligible to the nonscientist, the book consists of two parts. Part I, Introduction: Basics and Background, provides the biochemistry necessary to understand the rest of the book and describes analytical processes and results as an aid to grasping the science. Part II, Applications: Knowledge into Practice, explores measurement techniques for metabolism, energy expenditure of various activities, techniques that enhance expenditure, metabolic adaptation, foods and drugs that enhance expenditure, and the role of bioanalytical chemistry in future research in exercise and sport. Discussion of the benefits of exercise and practices for improving the capacity to perform exercise is illustrated by many useful and entertaining examples. This volume allows readers to come away with a grasp of the scientific concepts, how they are manifested in research techniques, and how the results of research can be applied in the real world of public health and personal development. Sports Coaching applies the principles of well-being theory and positive psychology to sport to establish a basis of servant leadership in sport organizations. Though the win-at-all-cost mentality is pervasive in sport, leading to acceptance of leadership styles more associated with controlling and extrinsic motivators, the author proposes need satisfaction based on three psychological needs: autonomy, competence, and belongingness, which leads to enhanced job performance, job satisfaction, and well-being. Through need satisfaction, servant leaders positively influence organizational outcomes by enabling followers' growth and well-being. This book will make a new contribution to sport management research in applying the principles of positive psychology to servant leadership and to sport.

Principles and Practice of Sport Management is an essential resource for any sport management course. For the last 25 years, a constraints-based framework has helped to inform the way that many sport scientists seek to understand performance, learning design and the development of expertise and talent in sport. The Constraints-Led Approach: Principles for Sports Coaching and Practice Design provides students and practitioners with the theoretical knowledge required to implement constraints-led approaches in their work. Seeking to bridge the divide between theory and practice, the book sets out an 'environment design framework', including practical applications.
